- Tools used: React, Firebase, React Router

Polar News,
polar.danfitz.com

- News analysis app that uses AI to measure the positivity/negativity of top news headlines
- Tools used: React, 2 APIs

Motivation

My passion for coding stems from my background in philosophy. Applying logic and big-picture thinking to all the code I write, I love solving problems, especially when the solutions mean a better experience for real users. At heart, I'm a lifelong learner who is happy as long as I'm always growing.
